

DETECT AND REACT TO CYBER THREATS FASTER

Advanced business threat search and monitoring

Organizations and governments invest in technology to protect and patch their network perimeters, secure their attack surface, and monitor what happens inside their networks and systems. But securing from the inside is not enough.

HOW DO YOU KNOW...

...whether your organization has been hacked and important information has been leaked?

...whether hackers are planning and coordinating an attack targeting your organization's network?

...whether someone is using your brand to lure people to fake or malicious sites or applications?

...whether credentials or credit cards belonging to your business have been compromised?

“ The average total cost of a data breach is \$4 million. 48% of breaches in 2016 involved a malicious attack, which can take up to 229 days to identify and contain, and cost more to remediate ”

2016 Cost of a Data Breach Study: Global Analysis, Ponemon Institute

THE BLUELIV SOLUTION PROTECTS YOUR ORGANIZATION FROM THE OUTSIDE IN

BLUELIV CYBER THREAT INTELLIGENCE PLATFORM

Manage threats from one single dashboard

We use sophisticated algorithms to automatically deliver actionable cyber threat intelligence from open, closed and private sources. This makes it easier to identify and manage real threats targeting your organization at a global level. The Blueliv CyberThreat Intelligence Platform enables you to easily recover stolen credentials and compromised credit cards, detect infected devices, discover rogue mobile applications, uncover leaked documents, find out relevant information in the dark web or locate phishing sites, among many other potential threats.

 Botnets & CC	 Targeted	 Credit Card theft	 Rogue mobile apps	 Hacktivism
 Data leakage	 Brand abuse	 Media tracker	 Phishing	 Dark web

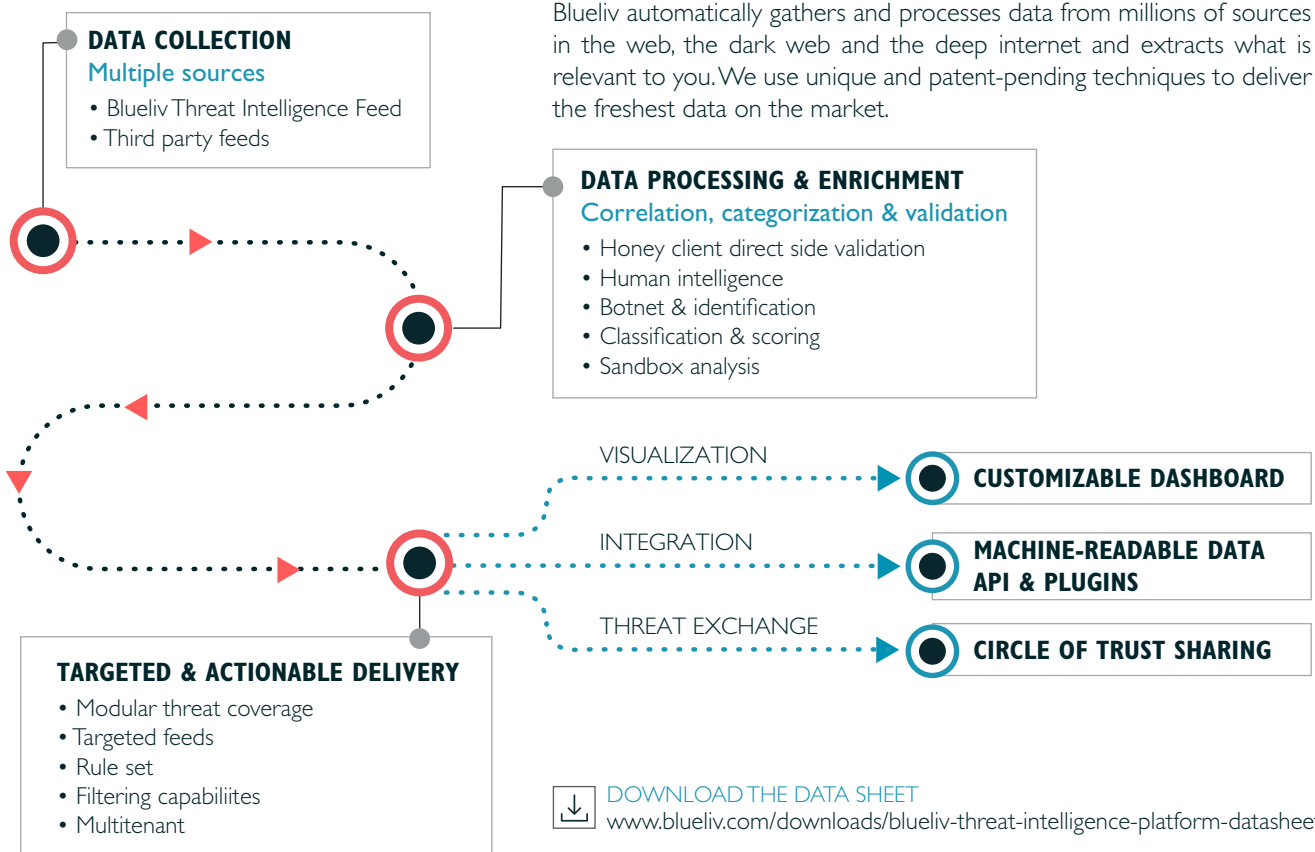

Our modular, subscription-based solution is completely customizable to your organization's needs and you'll see results just minutes after setup is complete. Process threat intelligence relevant and specific to your organization more effectively than ever before.

FOUR BUSINESS BENEFITS

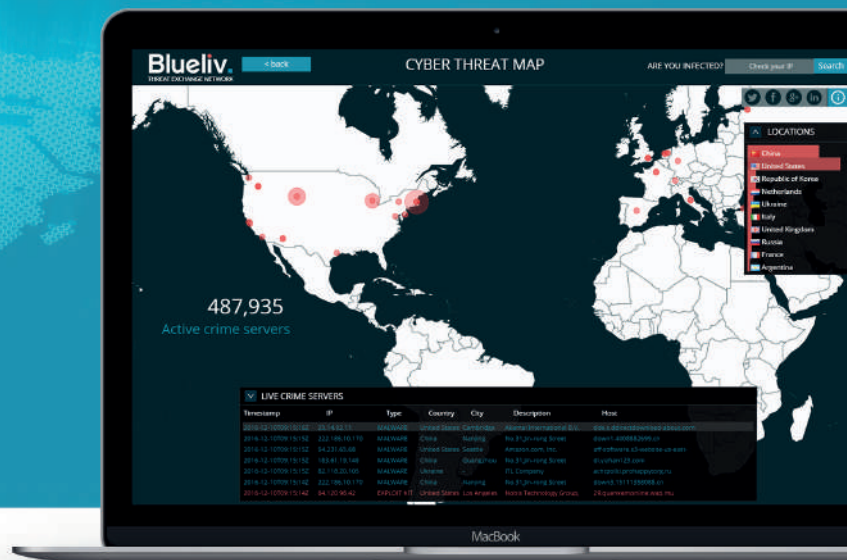

- 1 Business and targeted threat information:** React faster with actionable and relevant business threat intelligence information targeting your organization's assets at a global level. The Blueliv solution covers a broader range of cyber threats than any other service and enables you to process a higher volume of threat data with its unique capabilities and user-friendly functionality.
- 2 Unique techniques generate the freshest information:** Better threat visibility means shorter incident response times. Simplify threat data analysis, reduce false positives, and accelerate threat detection and remediation.
- 3 Proactive continuous search and monitoring:** The Blueliv CyberThreat Intelligence Platform is the only solution that continuously delivers real-time information about botnets and malware as well as data obtained from the dark web and deep internet. Reduce manpower and manual processes with real-time searches and automated incident detection.
- 4 Easy to deploy, easy to set up, easy to operate:** A cloud-based platform developed for SOCs conceived as a SIEM. Setup requires no onsite installation and minimal technical training. You'll see results instantly. We also provide a ready-to-use API enabling seamless integration with third party systems.

HOW IT WORKS

BLUELIV MRTI FEED

Multiply and conquer

In addition to our targeted business cyber threat intelligence platform, we supply highly accurate and verified global data feeds that you can use with your existing SIEM, and other security appliances, to detect and prioritize advanced threats. Counter a higher volume of known, unknown and emerging cyber threats at pace with the **Blueliv MRTI feed**.

SOURCES

- Crimeserver feed
- Bot IPs feed
- Attacking IPs feed
- Malware Hashes feed
- Hactivism ops feed
- Tor IPs feed

BENEFITS

- Validated and enriched data to contextualize every threat
- Unlimited threat intel streamed in real-time
- Delivered in STIX/TAXII standard
- Flexible and fast deployment through APIs, plugins and SDKs

ABOUT BLUELIV

Blueliv is a leading cyber threat intelligence provider with a world-class in-house Labs team. We scour the web, the dark web and the deep internet to deliver fresh, automated and actionable threat intelligence to organizations across multiple industries to protect their people, networks and brand assets from the outside in. Blueliv Threat Intel Research Labs is an in-house team of malware reversing experts. They analyze, classify and enrich the data you see, so you don't have to.

In 2015 Blueliv achieved 'Cool Vendor' status with Gartner and is a 2016 winner of Go Ignite.

ACHIEVING GLOBAL REACH THROUGH OUR CUSTOMERS AND PARTNERS

“After conducting a thorough investigation into the available solutions on the market, we chose Blueliv because of its unique 'need specific' modular offering, the team's highly personable nature, the fact that Blueliv has a European-oriented partner market approach, and the attractive pricing model.”

“As we see new threats and need new types of protection, Blueliv has it for us and we can immediately switch it on. There is no downtime, no need for hardware, and no need to wait for a new software release.”

Jose Ignacio Garrido Gonzalez.
Head of Global BBVA CERT.

Listed as sample Vendor in Gartner's 2016 Hype Cycle for Infrastructure Protection. “Featured as an Example vendor that helps you aggregate threat intelligence” and “Example provider of commercial threat intelligence feeds you can acquire” in Innovation Insight for Machine-Readable Threat Intelligence

BLUELIV THREAT EXCHANGE NETWORK

The Blueliv Threat Exchange Network forms part of a wider cyber threat ecosystem centered around a strong, collaborative community, and we want you to be a part of it.

Join the fight against cybercrime today.
